DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-30 are drawn to an apparatus for automated solid phase synthesis of oligosaccharides, classified in class 435, subclass 285.1.
- II. Claims 31-58 are drawn to methods for processing oligosaccharides, classified in class 536, subclass 55.1.

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process of Invention II, synthesis of oligosaccharides, can be practiced by another and materially different apparatus than that of Invention I, such as the apparatus set forth in US Patent No. 5,466,608.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their classifications and/or recognized divergent subject matter, a search, restriction for examination purposed as indicated is proper. To search these divergent inventions would indeed impose an undue burden upon the examiner assigned this application.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1623

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
